

Open Decisions Log

Unresolved framework and placement questions. Each carries a recommendation and stays open until Scott adjudicates. When resolved, move the entry to `resolved_decisions.md` as a dated ADR entry and update the relevant `use_cases/*.yaml`.

Framework-level

OD-8 — Workforce development ownership

No owner currently assigned for the Workforce development use-case. Strategic Insights owns AI solution delivery; Academic Affairs owns Curriculum integration. **Decision needed:** Who owns Workforce development? **Status: OPEN.**

OD-10 — Name for the central AI solutions team

"AI solution delivery" names the *use-case category* (the work), not a team. If/when a central team forms to own that work, it needs its own name, distinct from the category. Candidates surfaced 2026-08-11 (see chat, no doc yet): **AI Center of Excellence** (dominant industry/enterprise term — IBM, Microsoft, Oracle, SAP all use this pattern), **AI Enablement Team** (real, less formal, emphasizes helping others use AI over building for them — may undersell a build-for-others scope), **AI Solutions Team** (plain, low-jargon, keeps preferred word "Solutions"). Scott's stated preference: likes "Solutions," lukewarm on "Delivery" as the closing word — but this only applies to a future team name, not the existing "AI solution delivery" use-case category label, which stays as-is (see ADR-2 in `resolved_decisions.md`). **Decision needed:** Pick a name once/if a central team is formally stood up (linked to ADR-10 in `resolved_decisions.md`). **Status: OPEN.**

OD-11 — Single organization over all three use-cases + Capabilities/Foundation?

Should Curriculum integration, Workforce development, AI solution delivery, and Capabilities/Foundation all live under one umbrella organization (e.g. an "AI Council"), rather than being owned/coordinated separately as today (see OD-8, ADR-4 in `resolved_decisions.md` on the current per-category ownership split)? Distinct from ADR-10 in `resolved_decisions.md`, which resolved centralized vs. distributed *build* capacity specifically within AI solution delivery — this is about governance/ organizational structure across all four categories. **Decision needed:** Single umbrella org (e.g. AI Council) vs. keep separate ownership per category. **Status: OPEN.**

OD-12 — Tarleton's position on the AI maturity spectrum

Slide 3 of `pac_retreat_sources/event_artifacts/slides/Richardson_AI_landscape.pdf` ("Organizations Are Picking Their Pace") lays out a six-stage AI maturity spectrum: **Not AI-enabled** (no AI use) → **AI-assisted** (basic AI support in isolated areas) → **AI-augmented** (AI enhances, but not central) → **AI-integrated** (AI integrated into core processes) → **AI-centric** (AI is central to most areas) → **AI-native** (business fundamentally built on AI). Where does Tarleton currently sit on this spectrum? **Decision needed:** Pick Tarleton's current stage (and optionally a target stage/timeline). **Status: OPEN.**

OD-13 — PAC should prioritize AI solution delivery items

Proposal: when PAC holds the not-yet-held priority vote (see `CLAUDE.md` "Current status" and `roadmap/post_retreat_discussion.md`'s milestone table), it should specifically prioritize items within the AI solution delivery use-case category — i.e. weight/sequence the vote toward that backlog rather than treating all three use-case categories as equally urgent. **Decision needed:** Confirm PAC's priority vote should weight AI solution delivery items first/most heavily, vs. an even-handed vote across all three use-case categories. **Status: OPEN.**

OD-14 — AI Solution Delivery: reporting structure vs. logical/matrixed unit

Many of the job roles in `roadmap/ai_strategy_develop.md`'s AI Solution Delivery section are probably not full-time jobs and could be filled by existing staff (Scott has candidate names in mind) — but a role can't simply be stacked on top of someone's current job; some of their existing duties would need to be realigned to someone else. This raises a structural question, related to but more concrete than ADR-10 (in `resolved_decisions.md`) and OD-11: should AI Solution Delivery be a genuine organizational reporting structure (its own reporting line, staff formally moved/reassigned into it), or a logical/matrixed unit composed of individuals who keep their existing reporting lines in different units (e.g. Strategic Insights, ITS, Academic Affairs) but contribute part-time to AI solution delivery work? **Decision needed:** Real reporting structure vs. logical/matrixed cross-unit team — and if matrixed, how each person's existing duties get realigned to make room. **Status: OPEN.**

Item-level placement

(none currently open — see resolved_decisions.md for resolved item-level placements)
