Zach,

Attached are two important artifacts that will be used for the workshop:

- Slides “to keep the trains on time” during the workshop that Drew will facilitate
- “Draft a One-Page AI strategy” workbook that attendees will use to evaluate break out group’s case studies for completeness.

Here are the notes from our call today as reference:**Workshop Agenda, Structure, and Facilitation**

- The workshop agenda includes introductions, an overview of the Gartner team, a live demonstration of research agents, breakout case study exercises, group presentations, and a session to define the university’s Artificial Intelligence vision.
- The order of activities may shift depending on when the president concludes opening remarks, with flexibility to start case study training before or after the keynote.
- Facilitators will use a “keep the trains on time” slide deck to maintain flow and timing, with clear roles for timekeeping and session management.
- Breakout sessions will focus on hands-on tactical execution using Artificial Intelligence tools, with facilitators and university leaders acting as “rovers” to support groups without leading discussions directly.
- Group assignments will be randomized upon entry to ensure diverse participation, with adjustments made if necessary to avoid clustering of similar roles.
- Large flip charts provided by will serve as a low-tech alternative for group work, and

printed directions for Break Out #1 will be provided.

- *Taylor to prepare a one-page handout on using research agents and instructions for the case study before the workshop.*
- *Laura to assist with printing and formatting handouts as needed.*
- *Sarah, Natomi, and Drew to arrive Sunday, walk the space Monday morning.*
- *The group to meet Sunday night to review campus maps and parking.*
- *The president's office to provide flip charts and printed agendas for group work.*

Case Study Design and Decision-Making Framework

- The group decided to shift from using the internally generated list of questions to relying on Gartner's "seven steps of creating an Artificial Intelligence strategy" as the primary reference for participants.
- Participants will be prompted to identify gaps or missing elements in the provided frameworks, especially those relevant to the university's academic mission.
- The exercise aims to help participants tailor the Artificial Intelligence strategy to the university's unique context and identify areas not addressed by existing frameworks.

Workshop Logistics and Participant Experience

- Facilitators will arrive Sunday and early Monday to prepare for the workshop.
- Parking passes are likely unnecessary due to summer scheduling, but the math building lot is recommended for proximity to the venue.
- The group will meet Sunday night to review campus logistics and ensure all facilitators are oriented.

Alignment on Workshop Outcomes and Academic Focus

- The workshop is designed to deliver a clear, actionable Artificial Intelligence vision for the university, moving beyond ad hoc or trend-driven approaches.
- Participants will be encouraged to articulate what the university stands for in its Artificial Intelligence strategy and to identify missing elements relevant to teaching and learning.

Next Steps

@Drew Doolin

- Send the refreshed slide deck with Tarleton branding and colors applied.
- Resend the Gartner 'Create a One-Page AI Strategy Workshop' template to the team.
- Act as MC/facilitator for the workshop, manage timing, and direct breakouts.

@Cook, Dr. Scott

- Develop and deliver a one-page instruction handout for using the Researcher Agent to execute the case study (with Taylor).

@Gorman, Dr. Zach

- Share campus parking and wayfinding details during the Sunday night meet-up and guide the team on where to park Monday.

@Gorman, Dr. Zach & @Cook, Dr. Scott

- Rove among breakout groups during the workshop to prompt and support discussions without anchoring any single table.
