

The School of Social Transformation Generative AI Policy (Undergraduate and Graduate)

The School of Social Transformation (SST) is committed to fostering rigorous, ethical, and socially responsible learning and scholarship. SST's guidelines on generative ai tools seek to protect the integrity of student learning and scholarly work.

SST policy on generative ai applies to each of the following:

1. Courses (syllabi)
2. Course papers and written assignments
3. Capstone projects
4. Applied projects (undergraduate and graduate)
5. Qualifying papers/exams, comprehensive exams, portfolios, prospectus
6. Bachelor's (Honor's) theses, master's theses and doctoral dissertations
7. Certificate theses and applied projects.

SST's policy on the use of generative ai falls into two categories:

1. Permissible Use of Generative Ai with Disclosure

When an instructor allows the use of generative ai, SST policy requires students to disclose when and how they use ai in their undergraduate and graduate courses, program degree requirements, or graduate committees. Below is an example of a permissible ai policy with disclosure within an SST class, project, or committee:

EXAMPLE: Permissible generative ai use in this _____ (e.g., class, assignment, project, or committee) consists of brainstorming, proofreading, and/or stylistic revision. All analysis, interpretation, and ideas must be the author's own. When using ai, SST requires that students disclose how and what they use ai for such as assistance with idea development, outlines, drafting, and/or revision beyond basic proofreading. Not disclosing AI use in assignments constitutes academic dishonesty.

2. Impermissible Use of Generative Ai

Generative ai use is not allowable in this (class, assignment, project, thesis). Use of ai will constitute academic dishonesty.

EXAMPLE: The use of generative ai is not allowable in this _____. Violation of the ai policy will be viewed as academic dishonesty and a violation of [ASU's academic integrity](#).

****In the case where an instructor or committee does not have an ai policy, or it is not clearly conveyed, it will default to the Permissible Use of Generative Ai with Disclosure policy.**

Academic dishonesty about SST's policy on generative ai will constitute a violation of [ASU's academic integrity](#).
