

HiPerGator

The fastest supercomputer owned and operated by a university in the U.S.

Supercharging AI Research

HiPerGator, UF's AI supercomputer, is the fastest of its kind in higher education. Since 2020, UF has added more than 100 AI professors who have pursued groundbreaking new projects in AI. Our work is anchored by a \$50 million gift from UF alumnus and NVIDIA co-founder Chris Malachowsky and hardware, software, training, and services from NVIDIA.

HiPerGator is now used every semester in courses taught by faculty throughout UF and the State University System, and in research projects led by more than 6,000 researchers. HiPerGator is the power behind [Navigator AI](#), giving all faculty, students, and staff access to new generative AI capabilities such as Llama, ChatGPT, Gemini, Claude, and Diffusion.

More Advanced Computing

The UF Board of Trustees approved investing \$24 million to acquire a more advanced version of UF's HiPerGator supercomputer. This acquisition will make UF one of the first higher education institutions to use technology not even on the market yet.

The part of HiPerGator originally donated by Malachowsky—an NVIDIA DGX SuperPOD with DGX A100 systems—is being replaced by the new NVIDIA DGX SuperPOD with 63 [NVIDIA DGX B200 systems](#).

The systems include the [NVIDIA AI Enterprise](#) software platform and are connected and scaled by the [NVIDIA Quantum-2 InfiniBand](#) networking platform, providing 400 Gb/s bandwidth to each GPU. This fourth-generation version of UF's general purpose supercomputer will continue the evolution from HiPerGator 1.0 (2013-2021) to HiPerGator 2.0 (2015) to HiPerGator 3.0 (2021) and HiPerGator AI (2021).

This development is the latest milestone in UF's ongoing [collaboration with NVIDIA](#), which spans education, research, and operations at the university. Additionally, UF will bring value to the state and the larger region by sharing access to HiPerGator with schools across the State University System of Florida.

HiPerGator Is for Everyone

UFIT Research Computing maintains the cluster and its many parts, allowing researchers to focus on their research instead of hardware and software maintenance. UFIT Research Computing supports a significant number of widely-used applications.

HiPerGator can be used by faculty at UF and at colleges and universities in Florida or the SEC for teaching and research using these options and procedures:

1. For teaching a class, allocations are free and they last one semester. See [classroom support](#) for detailed instructions.
2. For research, allocations can be purchased for periods ranging from three months to several years. The rates are listed on our [price sheets](#).
3. Faculty may request a three-month trial allocation for developing a course in advance of teaching the course, and to explore the use of HiPerGator for research. Please work with UFIT Research Computing staff to find the best path for using HiPerGator.
