Enterprise Technology

FY26

FY26

Strategic Priorities

Enterprise Technology champions a revolutionary transformation empowering a global community of students, faculty and innovators to change futures for the world right now. We achieve this profound ambition by architecting human-centered digital experiences and spearheading innovations that **elevate the future of education, discovery, and societal advancement.**

Our north star, anchored in **ASU's Design Aspirations**, is to position ourselves as a global beacon for integrating emerging and disruptive technology into learning ecosystems, communications and operations to amplify human potential throughout the educational journey of students, staff, faculty, researchers, and the broader community.

Our commitment is to forge a future where **an exceptional human-centered technology experience** advances ASU's most transformative aspirations. Our strategic priorities and goals translate this dedication into focused, collaborative action. The achievement of these objectives, some being multi-year endeavors, represents our unwavering resolve to deliver on this future.

- A silhouette of a city skyline at sunset, with various buildings and a crane visible against a warm, orange-hued sky.
1. Advancing next-generation innovation for student and learner success
 2. Advancing learning at scale with ethically-guided AI
 3. Transformation towards a dynamic AI-centric organization
 4. Orchestrate strategic impact and enterprise responsiveness
 5. Information security
 6. Social impact and inclusive excellence
 7. Data, analytics and insight
 8. Technology enablement and digital infrastructure
 9. Digital transformation

1. Advancing next-generation innovation for student and learner success

Accelerate learning solutions and dynamic technologies to equip all students and learners to achieve lifelong success.

Goals:

- Design and scale innovative learning experiences that improve outcomes and support lifelong success, in collaboration with Academic and Learning Enterprise partners.
- Partner with scholars and external stakeholders to explore use-inspired practical research that supports teaching and learning systems at scale.
- Deploy AI-enhanced tools that elevate teaching and learning, while building AI literacy for faculty, staff, and students in collaboration with the Academic Enterprise.
- Collaborate across the ASU Enterprises to advance and pilot emerging technologies for teaching and learning at scale.
- Partner with ASU Health and Learning Enterprise to advance the development of AI-powered Precision Health and Medical Education platforms.
- Enable digital, verifiable credentialing within and beyond the ASU ecosystem to increase credit mobility, learner success and learner agency.
- In partnership with the Academic Enterprise, deliver professional learning that equips educators with the skills, confidence, and resilience to lead with technology.

2. Advancing learning at scale with ethically-guided AI

Harness AI and emerging technologies to transform learning experiences and expand educational reach, ensuring all AI-driven learning solutions are principled and support the needs of students and learners.

Goals:

- Develop and evolve custom platforms that enable anyone at ASU to design and build AI-powered solutions in an easy-to-use and secure environment.
- Continuously enrich integrated data sources for personalized learner feedback and education for enhanced personalized coaching.
- Amplify global humanitarian impact through scalable innovation and strategic partnerships.
- Pioneer and operationalize next-generation solutions with advanced AI and XR to solve complex problems for societal advancement.
- Advance AI-powered learning workstreams in partnership with the President's Office, Office of the COO, Academic Enterprise (including EdPlus), Learning Enterprise, Business and Finance and ASU Health.
- Co-create and activate Realm 5 learning strategies across the Enterprise
- Serve as connectors of stakeholders to synergize efforts and ensure equitable access to computational resources.
- Develop a platform for transformational education and collaboration using AI Augmented Avatars, or Digital Persona "Avatars" for virtual patient and SIM encounters using an AI-assisted interface with learner feedback.

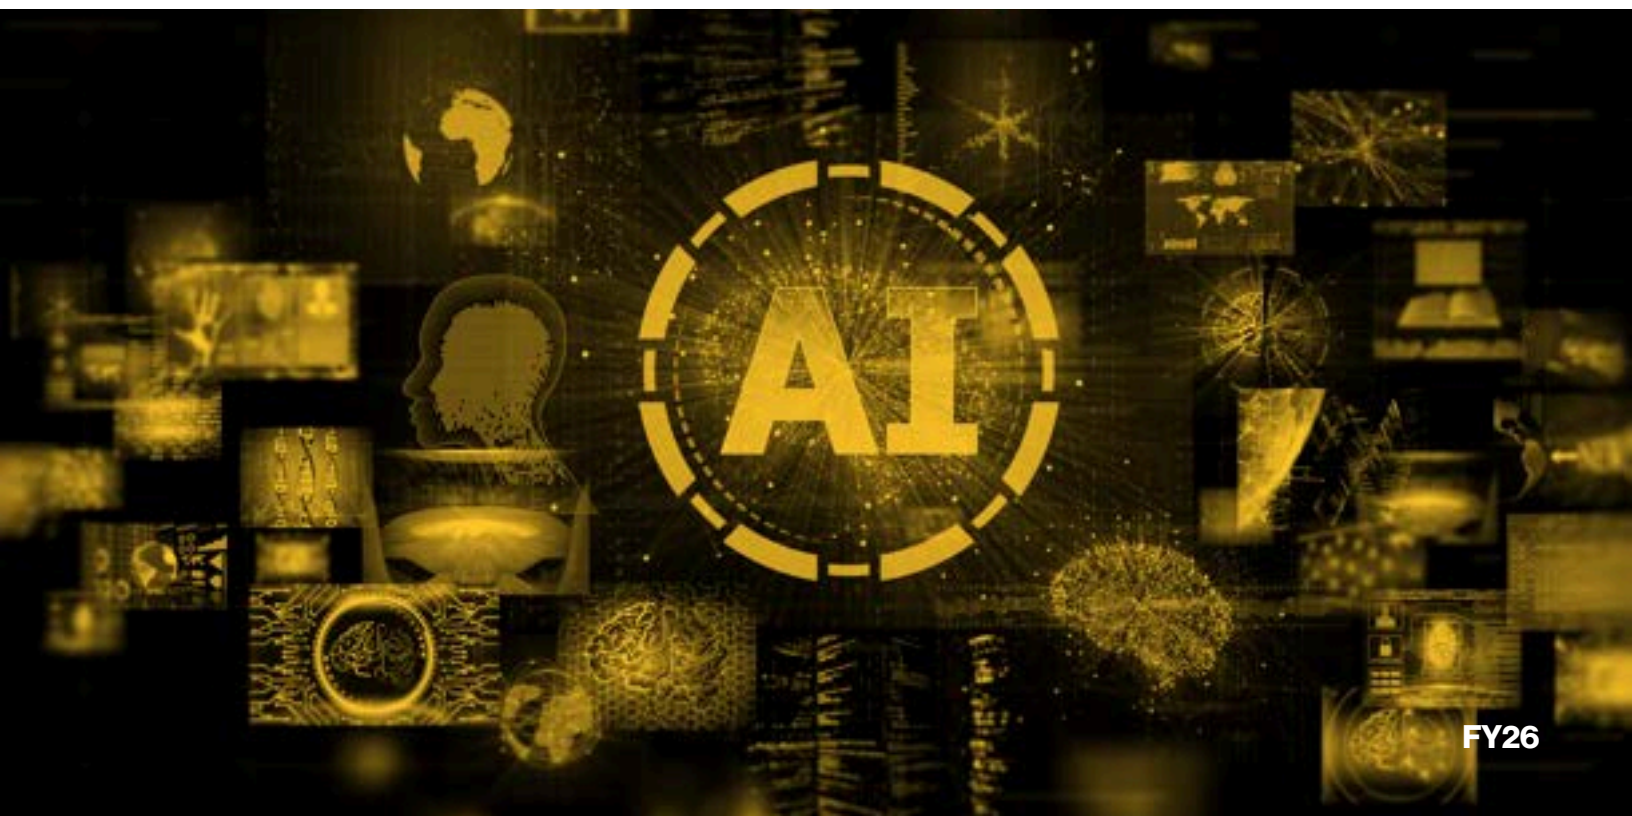

3. Transformation towards a dynamic AI-forward organization

Cultivate an energizing technology culture where our people are the priority in an environment defined by inclusive collaboration, innovation and a shared enthusiasm for the broad adoption of AI.

Goals:

- Continuously committed to being a values-led and human-centered organization that supports a growth mindset and empowers all to lead where they are for the advancement of self and ASU.
- Increase pathways for team members to participate authentically in Enterprise Technology, being an AI leader.
- Champion new organizational capabilities to deliver proof of concepts and minimum viable products at the intersection of AI and emerging technologies.
- Foster an entrepreneurial culture that empowers team members to innovate, embrace ownership, take agency, and thrive.
- Drive organizational excellence by implementing a workforce development strategy that enables a skills-based organizational approach and professional growth toward a future-ready workforce.

4. Orchestrate strategic impact and enterprise responsiveness

Drive a highly collaborative and agile framework for how we identify, define and execute strategic directives from the President's Office, University Provost, Office of the Chief Operating Officer, Chief Financial Officer and the ASU Enterprises.

Goals:

- Execute against specific strategic and tactical directives from the President's Office, the University Provost, the Office of the Chief Operating Officer, Chief Financial Officer, and the ASU Enterprises.
- Collaborate with ASU Health and associated schools and colleges to enable learning technology, enhance research capabilities, engage health partnerships, and support ASU enterprise integration for operations.
- Accelerate coordination across the ASU Public Enterprise to mature the Enterprise to be an AI-forward organization.
- Develop multimodal AI storytelling that combines written, visual, audio, and interactive content to elevate ASU's leadership in AI innovation and to position the university as a national model for AI communications in higher education.
- Collaborate with the Enterprise Brand team to deliver a premium experience in the asu.edu web ecosystem, including accessibility, personalization, and compliance with web standards.

5. Information security

Enable everyone at ASU to safely thrive and succeed in a trusted and secure digital ecosystem.

Goals:

- Establish ASU as a model enterprise capable of digital security and trust, fostering an environment where cutting-edge innovation at social scale flourishes.
- Expand Enterprise Technology's cybersecurity metrics program to continuously assess and understand ASU's risk landscape and security posture.
- Execute a comprehensive data privacy strategy that ensures compliance with privacy requirements and supports the adoption of AI technologies.
- Operationalize a framework for AI data security and privacy to ensure that in-house and third-party AI tools are secure and private.
- Activate an Enterprise Technology cross-functional team to identify the desired information security architecture across multiple technology disciplines and domains.
- Cultivate a proactive risk management culture through departmental transparency around risks and the effectiveness of adopted security controls.
- Increase students' employability by establishing a workforce program that provides practical and AI-forward security experience.

6. Social Impact and Inclusive Excellence

Advance communities we serve through strategic partnerships, digital inclusion and technological innovation. Our commitment to fostering inclusive environments and empowering communities enables us to deliver on ASU's Charter.

Goals:

- Advance execution of the Maricopa County Broadband Initiative grant and growth of AZ-1.
- Continue to foster and advance work with Sun Corridor Network and the IDIA (Institute for Digital Inclusion Acceleration).
- Advance ASU's opportunities to build and strengthen partnerships with state, federal, and community organizations, businesses, and other stakeholders to enhance the organization's impact and reach, to advance ASU's Charter and commitment to being socially embedded.
- Activate partnerships across ASU Public Enterprise to improve social impact, inclusive excellence and workforce development in support of students, staff, and faculty.
- Develop metrics to measure the impact of programs and initiatives that effectively communicate results to stakeholders, demonstrate value, and ensure accountability.
- Co-design experiential opportunities across ASU to facilitate cross-disciplinary collaboration and skill development while maximizing resources for community impact, including, but not limited to, AI Day at ASU, Agentic AI and Student Experience Summit, ASU+GSV Summit, 100 Year EdTech Summit.
- Advance and amplify the ideal future state of Enterprise Technology culture.
- Support ASU Health and its partnerships with technology platforms to accelerate collaboration and innovation, leading to improved health outcomes in the community.
- Strategize with ASU Foundation on Tech for Good initiatives and partnerships in support of "Changing Futures" and supporting unique opportunities.

7. Data, analytics and insight

Advanced enterprise-wide data maturity to drive data-informed outcomes.

Goals:

- Drive a technology operations metrics program, empowering departments with analytics and insight for accelerated continuous improvement.
- Implement proactive data quality assurance to safeguard stakeholder experiences.
- Launch a comprehensive data management tool to enhance stakeholder self-service concerning data descriptions, lineage, and definitions that will also serve as a foundation for AI tools.
- Implement AI-powered solutions to transform the data analytics user experience that provide operational data assistance and foster a data-informed culture.
- Establish robust data orchestration and appropriate governance, analytics capabilities, and accessible data platforms to enable informed and agile decision-making across the organization, ensuring data integrity and secure access.
- Increase the value derived from our data by delivering simplified data access solutions that meet the needs of stakeholders regardless of analytical expertise.

8. Technology enablement and digital infrastructure

Ensure ASU has a reliable, future-ready digital environment that is securely built to enable strategic ambitions.

Goals:

- Achieve operational excellence across technology operations, ensuring a consistently resilient and responsive digital infrastructure environment prepared for evolving enterprise needs.
- Strengthen operational resilience with advanced diagnostic capabilities and intelligent generation of actionable documentation.
- Advance digital infrastructure with the next phase of ASU's capital investment, focusing on wired and wifi capabilities and quantum networking.
- Upgrade architecture of the ASU Metro Ring to increase speed from 100 Gbps to 1.6 Tbps.
- Accelerate modernization of identity and access environment in service of ASU's hyper-scale needs.
- Advance application modernization prioritizing human-centered design, agility, and reducing technical debt.

9. Digital transformation

Deliver unified and optimized technology experiences that bolster staff success across ASU and enhance constituent experiences.

Goals:

- Create a digitally optimized environment where technology teams are empowered with integrated tools, intelligent data, and streamlined processes to execute work easily and quickly.
- Implement AI-powered solutions and proactively evaluate emerging technologies to enhance operational efficiency and effectiveness across ASU.
- Proactively partner with ASU Enterprises and business units to advance the recruitment of digital worker equivalents for increased seamless experiences supporting staff success.
- Accelerate the modernization of enterprise web and mobile solutions to transform digital capabilities and cultivate an AI-empowered workforce to ensure a future-ready, operationally agile, and highly optimized ecosystem.
- Advance a more robust use of data for personalized and streamlined digital interactions in partnership with key stakeholder groups for enhanced constituent experiences.
- Optimize financial aid and matriculation processes and modernize the enabling technology to increase institutional efficiency and deliver a frictionless, supportive experience for students and staff.
- Advance digital collaboration through optimized enterprise-scale solutions that unify services and support where appropriate, eliminate duplication of effort, enhance efficiency, and ensure a simple, safe, and secure digital environment.
- Champion unified product experiences that make digital interactions feel effortless, innovative and engaging.
